

V2-24: Immersive Space and High-Performance Analytics

Mission-Critical Computing

NSF CENTER FOR SPACE, HIGH-PERFORMANCE,
AND RESILIENT COMPUTING (SHREC)

SHREC Annual Workshop (SAW23-24)

Faculty

Chris North, Doug Bowman

Students

Sungwon In, Kylie Davidson,
Ibrahim Tahmid, Xuxin Tang

January 17-18, 2024

Number of requested memberships ≥ 5

Task 1: Immersive Data Science

Mission-Critical Computing

NSF CENTER FOR SPACE, HIGH-PERFORMANCE,
AND RESILIENT COMPUTING (SHREC)

SHREC Annual Workshop (SAW23-24)

Sungwon In

January 17-18, 2024

Data Transformations + Data Visualizations in Computational Notebook

Previously

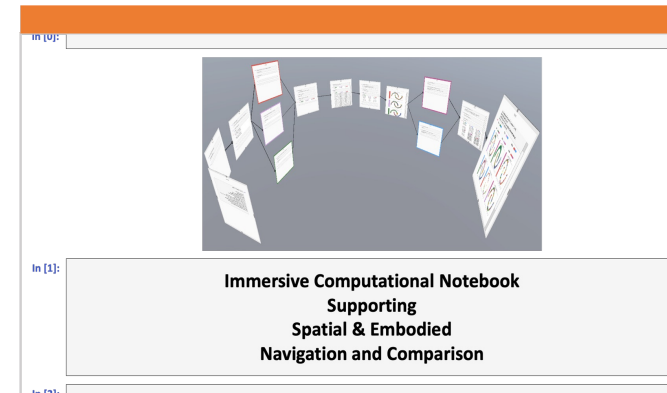

- Built computational notebook for virtual reality using embodied gesture and navigation

More matters in notebook

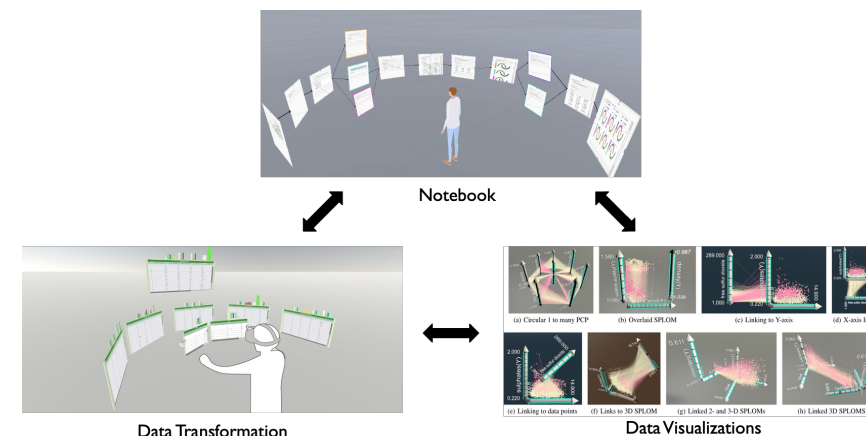

- Complicated transformations and visualizations process
- Transitioning between tasks in data science pipeline

Questions

- How can we create a comprehensive environment within notebook systems that effectively supports both data editing and visualization through embodied interaction?
- How effective is embodied interaction in facilitating the transition between different scenarios within a notebook environment?

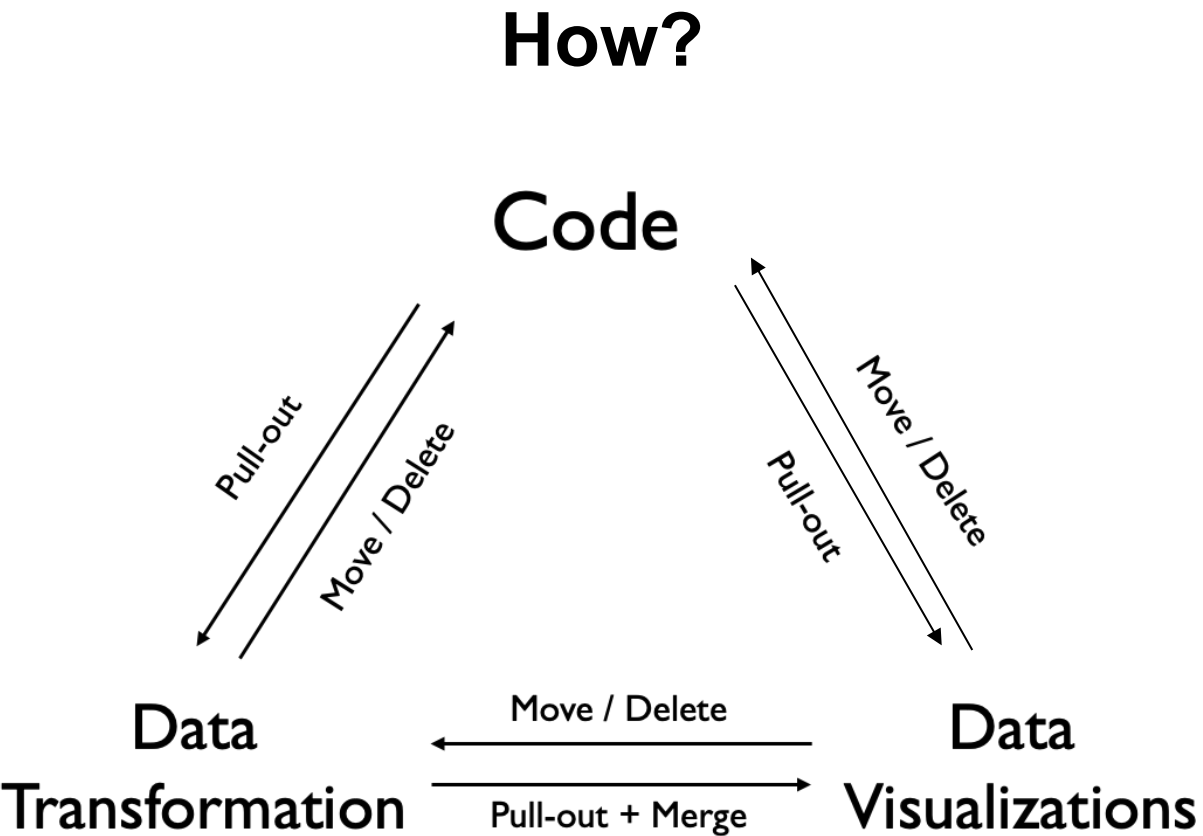

Previous

Expected comprehensive environment

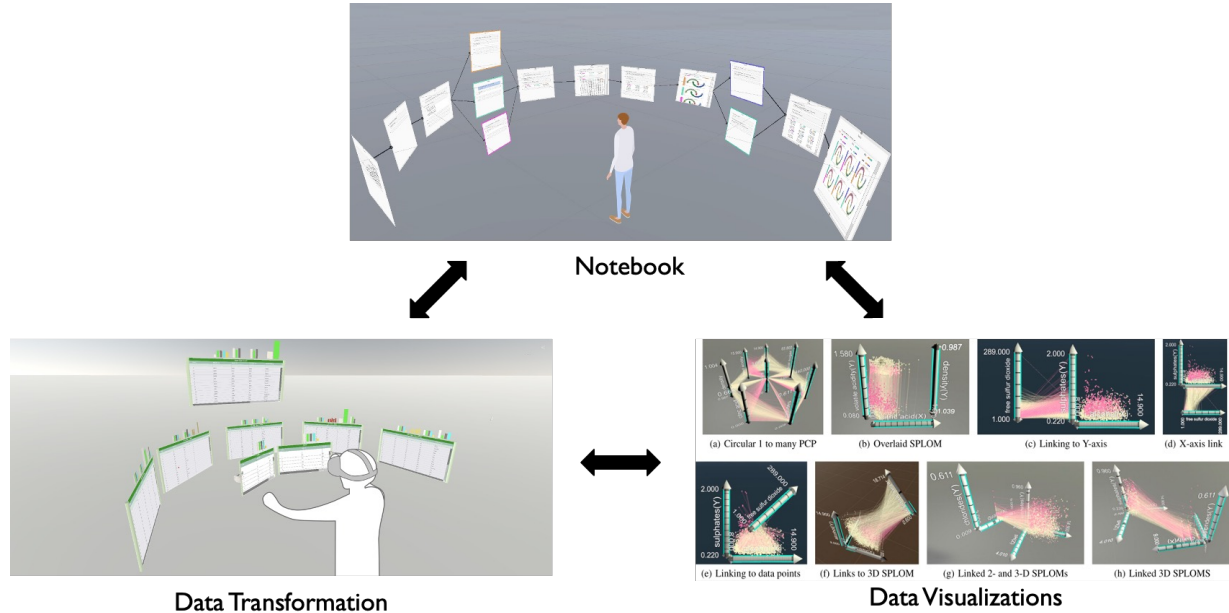

Data Transformations + Data Visualizations in Computational Notebook

Data Transformations + Data Visualizations in Computational Notebook

Plan

- Embodied transitioning between
 - Notebook (code)
 - Data transformation
 - Data visualizations
- Enabling intuitive data transformation and authoring data visualizations
- Assess the impact of an comprehensive notebook environment incorporating embodied transitions

History tracking in Computational Notebook

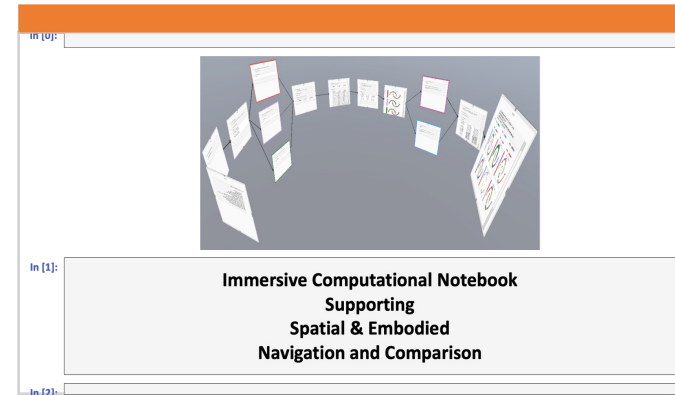

Previously

- Built computational notebook for virtual reality using embodied gesture and navigation

More matters in notebook

- Many things to keeping track of
 1. Codes
 2. Results
 3. Execution order
 4. Kernel state

**Gets lot more complicated when
number of notebooks/codes
increase!**

Previous

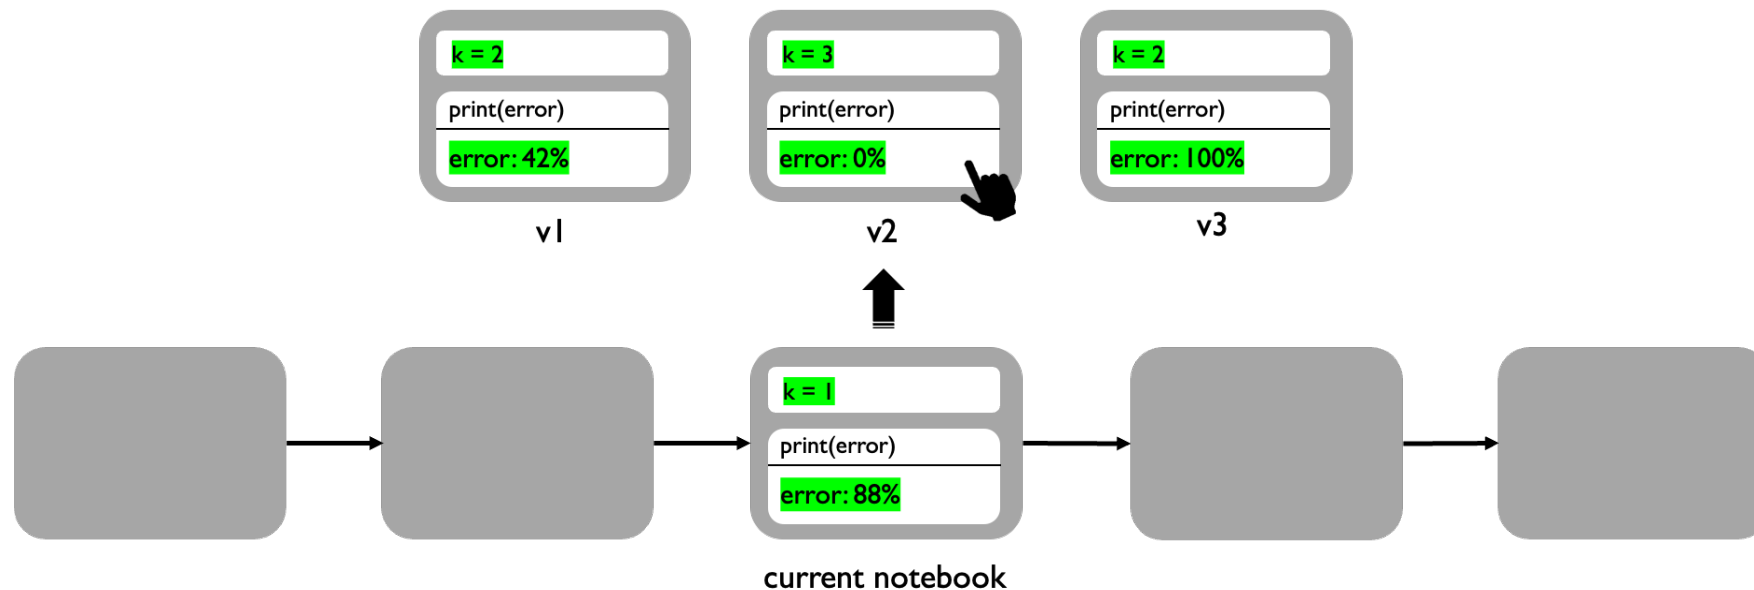

History tracking in Computational Notebook

Questions

- How does the integration of enhanced visualizations in a VR notebook impacting data analysis performance efficiency?

Plan

- **Enable environment that can easily track of**
 1. Codes
 2. Results
 3. Execution order
 4. Kernel state

Task 2: Immersive Sensemaking

Mission-Critical Computing

NSF CENTER FOR SPACE, HIGH-PERFORMANCE,
AND RESILIENT COMPUTING (SHREC)

SHREC Annual Workshop (SAW23-24)

Kylie Davidson

January 17-18, 2024

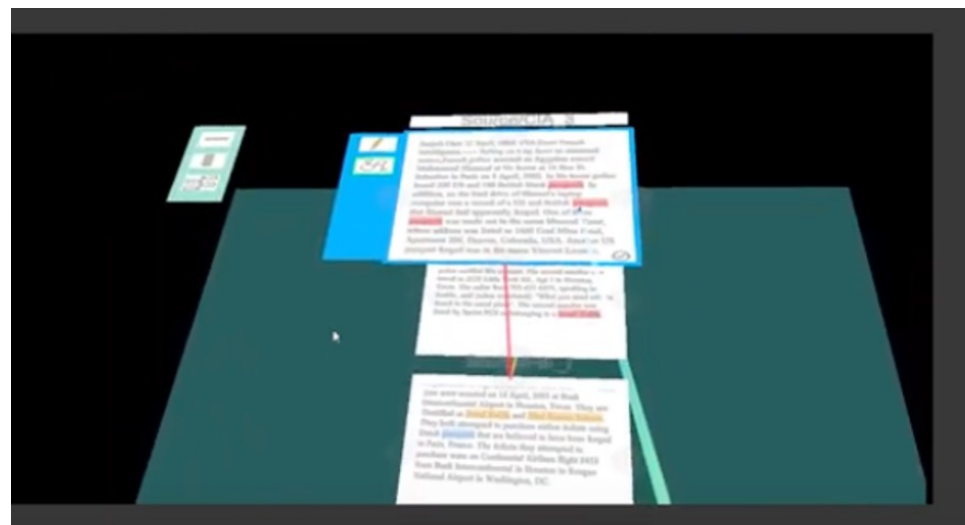

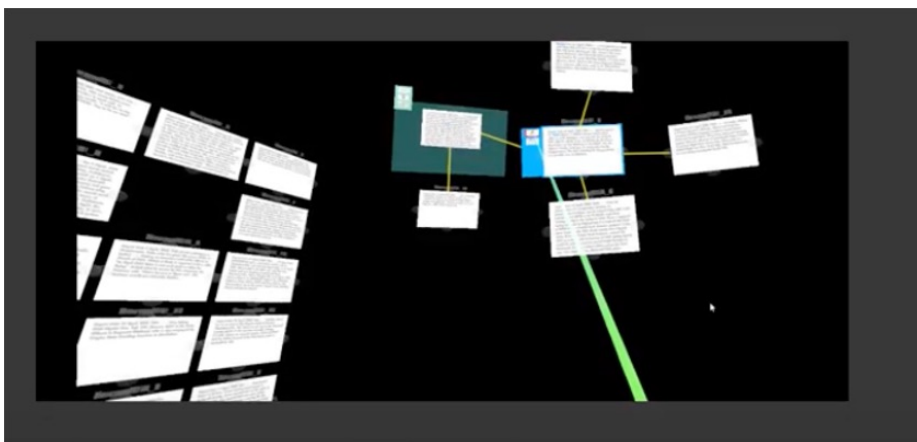

Building Support for Immersive Sensemaking

Question:

How do we develop organizational tools to allow users to offload cognition into the immersive environment?

Plan:

Evaluate effects of new organizational features on the sensemaking process

Task 3: Immersive Semantic Interaction

Mission-Critical Computing

NSF CENTER FOR SPACE, HIGH-PERFORMANCE,
AND RESILIENT COMPUTING (SHREC)

SHREC Annual Workshop (SAW23-24)

Ibrahim Tahmid

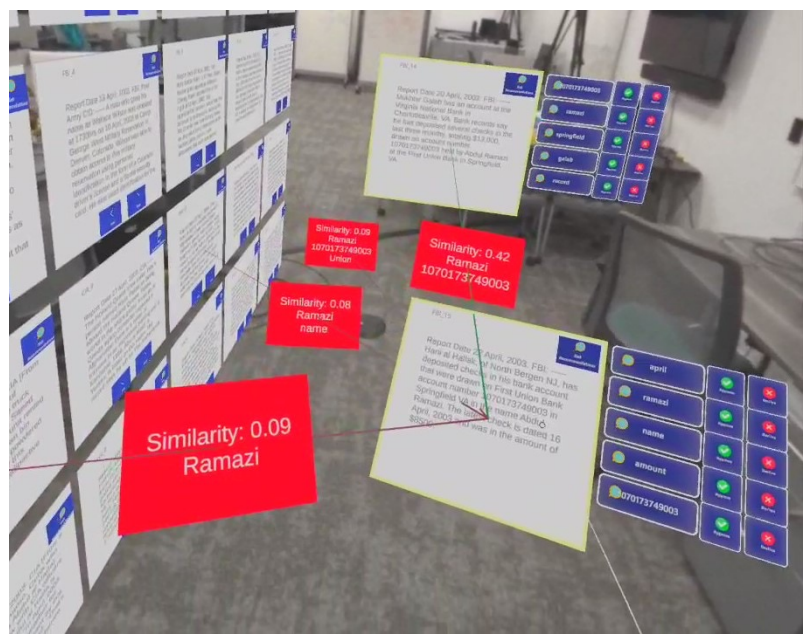

January 17-18, 2024

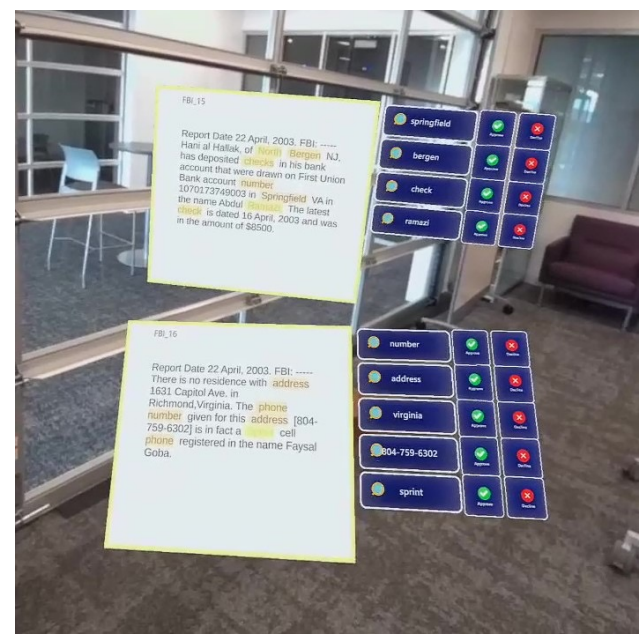

Task 3: Immersive Semantic Interaction

Previously Gaze data can predict the information relevance as perceived by the human analyst
Research Question How can we use the gaze data to help analysts in real time during sensemaking tasks?

Plan for This Year

Suggesting new information based on gaze data

Offloading mental concept by leveraging gaze data

Task 4: Interactive LLM for High-Performance Sensemaking

Mission-Critical Computing

NSF CENTER FOR SPACE, HIGH-PERFORMANCE,
AND RESILIENT COMPUTING (SHREC)

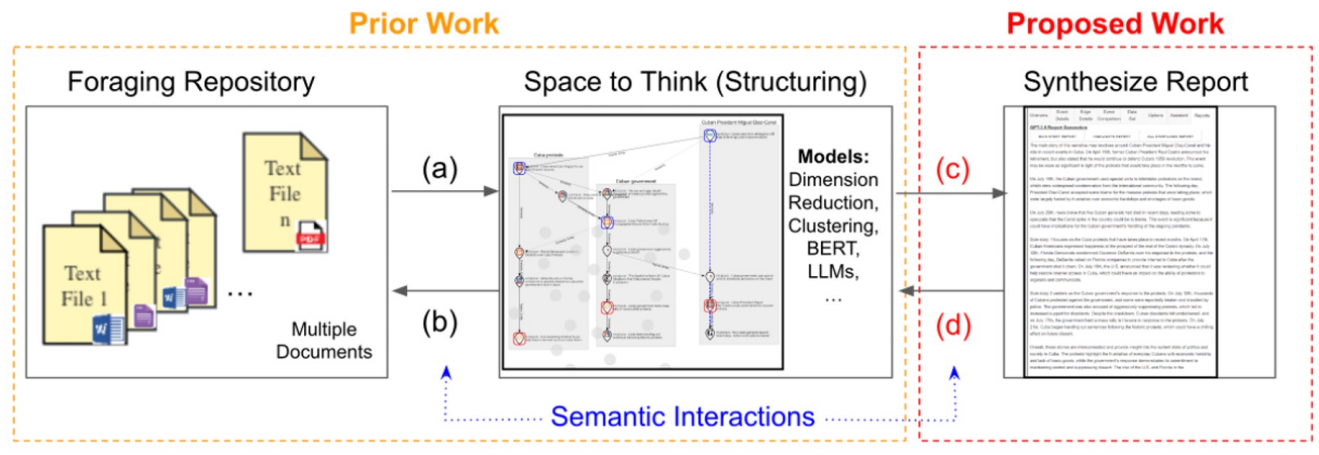

SHREC Annual Workshop (SAW23-24)

Xuxin Tang

January 17-18, 2024

LLMs-powered semi-automatic AI assistance for sensemaking

Question:

How can **Large Language Models (LLMs)** increase human performance for synthesizing meaningful reports from collections of documents using interactive-AI assistance?

Plan:

- Interactive AI prototype for LLMs-powered report generation.
- Evaluate the effect of LLMs and AI assistance on human performance in sensemaking and summarization tasks.
